GO Molecular Function
Upregulated in 50 ng/ml
structural molecule activity
ribosomal structural constituent
cytokine activity
ATP-dependent folding chaperone
chemokine activity
receptor ligand activity
ATP hydrolysis activity
receptor activator activity
receptor regulator activity
CXCR chemokine receptor binding
Downregulated in 50 ng/ml
actin binding
cell adhesion molecule binding
ECM structural constituent
calcium ion binding
molecular transducer activity
signaling receptor activity
receptor regulator activity
actin filament binding
integrin binding
glycosaminoglycan binding
GeneRatio
0.02
0.05
0.08
